Adaptive Recognition

Safe traffic. Verified identity. Enhanced security.
Image analytics perfected – since 1991.

Adaptive Recognition provides technology for improving the security in society through continued development of innovative products and services. As a pioneer in optical character recognition (OCR), the company offers devices, software and integrated solutions for transportation, identity and security industries.

Global presence

30
years of experience
in OCR, image processing and machine learning

4
offices
Denmark, Hungary, Singapore and United States

25
representative
partners across the globe

Our full story >

Adaptive Recognition's key scope is the development of AI-based, deep learning assisted image processing algorithms, and connected imaging devices and sensors that are serving/working for better and safer road traffic monitoring, and identity document verification, and intelligent video surveillance systems. We are often referred to as pioneers and experienced market leaders in three areas:

- **Automatic Number Plate Recognition** (ANPR) software, including make & model and color recognition (MMR). In addition to these ANPR+MMR software solutions that are available as both on-premise and cloud-based, we produce a selection of purpose-made cameras for monitoring road traffic, measuring speed and recognizing driver behaviour. These cameras and software solutions can form complex, Integrated Transportation Systems (ITS) like national toll collection or traffic enforcement systems.

- **ID & passport reader and verification solutions.** In order to achieve the best results, we provide purpose-made scanner devices that read all printed and electronic data from IDs and analyze their data consistency and visual attributes to spot fake or modified IDs.

- **Intelligent video surveillance systems** that contain IP cameras with on-board image processing analytics and server-side intelligence encompassed by a video management system that offer intelligent event-based search, so those records of interest become instantly accessible when needed.

Full portfolio

It's all about recognition and image analytics: vehicles, ID documents, security surveillance and more. Our portfolio has 6 key categories – click to see the list products and solutions:

Automatic Number Plate Recognition

Industrial Code Recognition
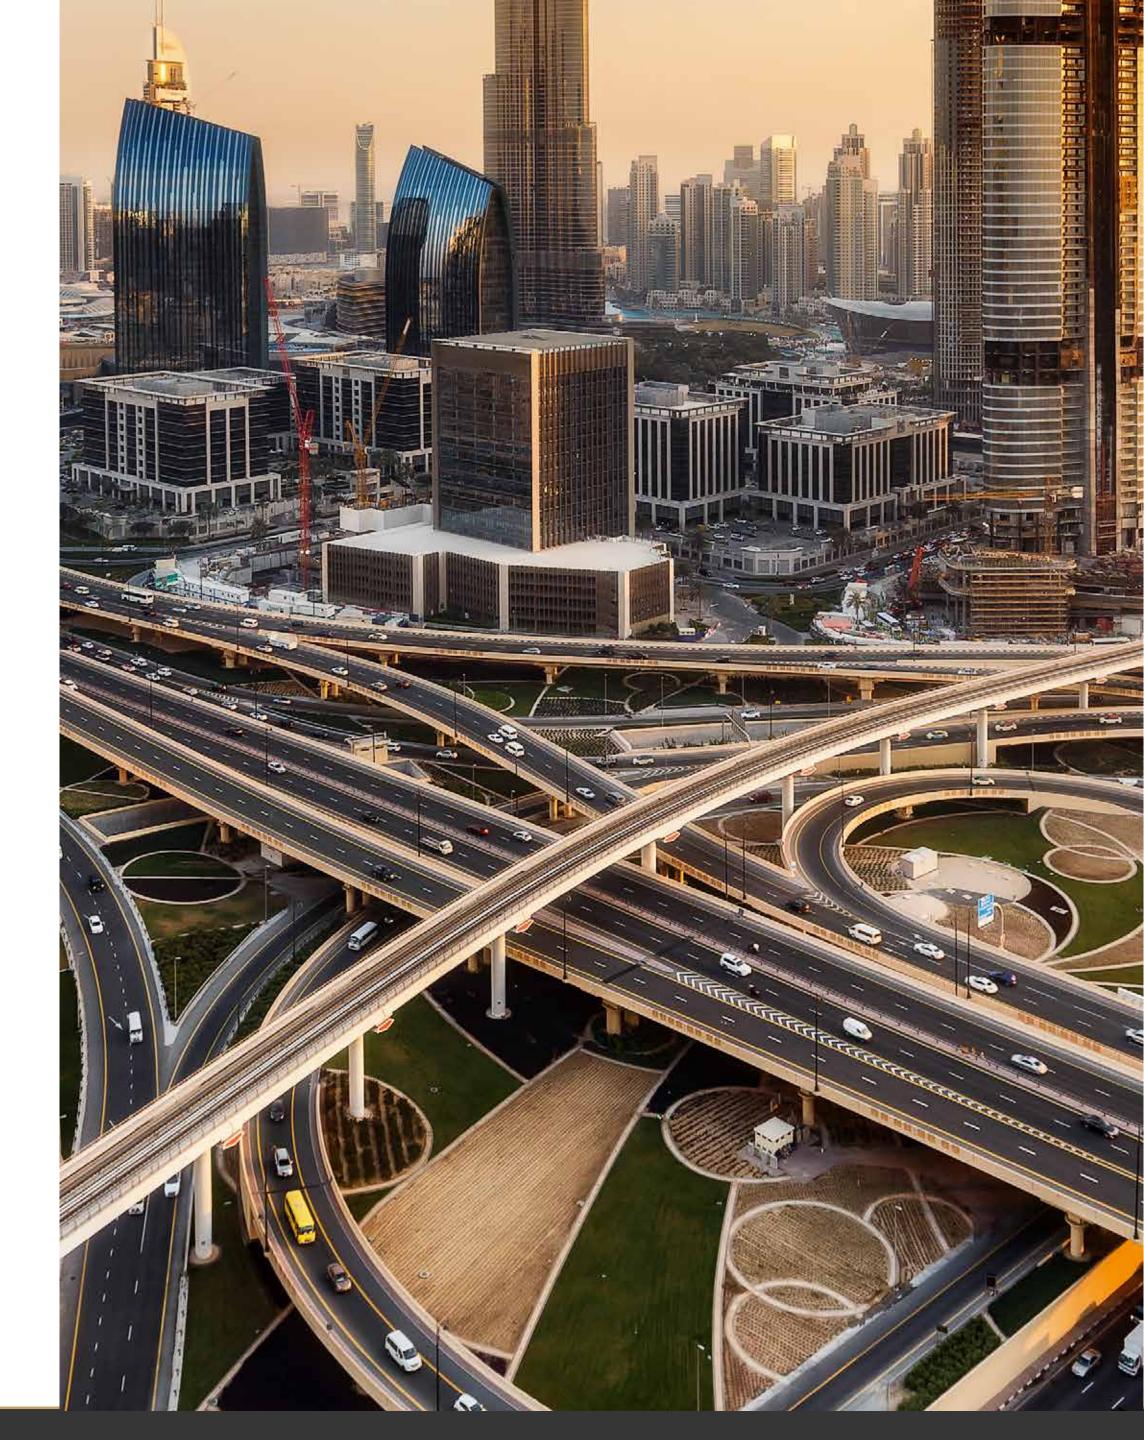

Traffic Monitoring Cameras

ITS & Smart Parking Solutions

Passport Readers & ID Scanners

Video Surveillance

Numbers we are proud of

In our 30-year presence, we managed to reach a remarkable position in the traffic, identity verification and intelligent surveillance / CCTV industries. Being in direct contact with thousands of system integrators partners, our technology is present globally as part of various end user solutions.

100,000+
ANPR / traffic systems

60,000+
Identity verification systems

12,000+
satisfied partners

Key industries & Application areas

As the world gets speeded up – absolutely new requirements appear in the traffic, identity and security industries – with the need of security and automation at the same time (and their perfect collaboration). These technologies crawl into our everyday, creating a safer and more convenient life – either it is a bank, a highway or a border control station. We collected the 10 key application areas / industries where our technology plays an important role. Each has its dedicated webpage – click on the tiles to find out more:

| Governmental applications | Transportation & logistics | Smart city | Traffic safety | Leisure & travel |
| Banking & finance | Access control systems | Front office operations & retail | Tolling systems | Public & private area security |

Values

Our company...

- is a truly R&D oriented business
- is always open to new challenges
- creates state-of-the-art technology
- believes in continuous improvement
- offers customer-focused teamwork

People at Adaptive Recognition

340+

Employees in total*
* according to 2020 / Q4

60%

in R&D and software/hardware development

Corporate Certifications

ISO 9001

Quality management system that embraces the entire operation workflow: manufacturing, sales, marketing and customer support.
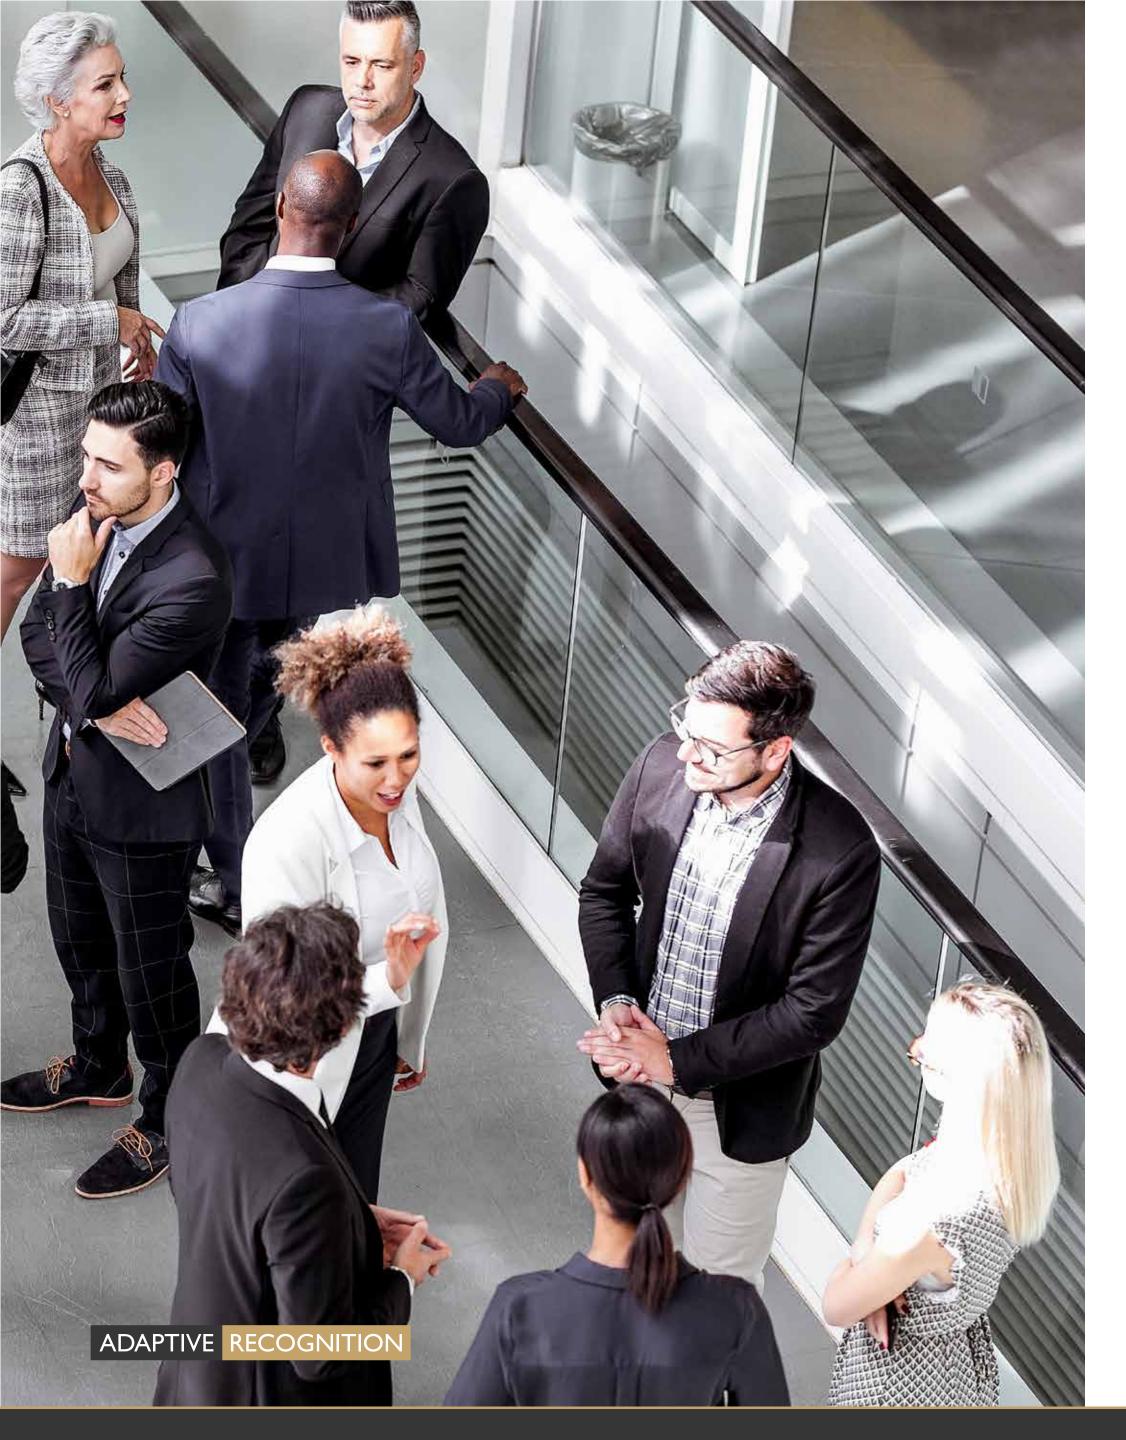

ISO 14001

Environmental management system that helps Adaptive Recognition to minimize the negative environmental effects of its operations. Adaptive Recognition is committed to being a green company.

ISO 27001

Information security management system that ensures the protection of confidentiality, integrity and availability of sensitive data in the operation of the company.
