## INTRODUCTION

Engine Manager Pro is a utility for Windows and Linux based systems, that enables the management of all kinds of OCR engines for the CARMEN® ANPR and CARMEN® OCR Software's main module. This utility is part of the CARMEN® ANPR / OCR Software's download package, and it is automatically installed along with the software.

This document will detail the following:

- How to install engines on Windows and Linux systems
- How to use the Engine Manager PRO application
- How to remove/uninstall engines from Windows and Linux systems

This application can be found in the following folder:

- On Windows: "c:\Program Files\Adaptive Recognition\CARMEN softwares\EngineManagerPro\"
- On Linux: "\opt\gx64\EngineManagerPro\"

#### Important

Please note, that this application is not available for ARM and CenOS6 packages on Linux.

## **ENGINE INSTALLATION**

#### Important

Before installing the engine(s) make sure that no other process on the PC is using CARMEN $^{\$}$  ANPR / OCR.

Engines are to be downloaded from ATSS and arrive in a zip file. For example, the 2020 Q3 general engine: *cmanpr-gen-7.3.12.169\_20Q3.zip*. This zip file contains 2 different folders:

- linux

- windows

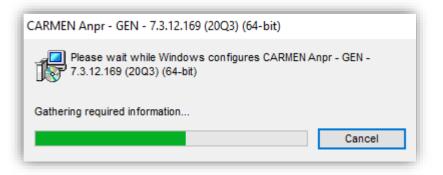

#### 🛛 Note

CARMEN<sup>®</sup> ANPR and CARMEN<sup>®</sup> OCR engines are the same from installation point of view so all the rest is true for the CARMEN<sup>®</sup> OCR engines as well.

## INSTALLATION ON WINDOWS

In the "windows" folder in the zip file which you have downloaded from ATSS you can find the installer files. For example, the 2020 Q3 general engine: cmanpr\_gen\_7.3.12.169\_20Q3\_x86.msi or cmanpr\_gen\_7.3.12.169\_20Q3\_x64.msi - (32-bit and 64-bit versions). This folder also contains a text file which refers to this document and the previous version of it.

After locating the engine(s) in the selected download folder, simply double click on it to begin installation.

Click yes when asked for allowing app to make changes to your device.

#### 🖵 Note

The newly installed engine will be the default engine.

To check the installed engine(s), open the Engine Manager Pro application (see chapter 2).

#### 🛛 Note

You can locate GXSD.DAT in this folder: c:/ProgramData/gx/ This file contains all of the installed engines and their properties. It is NOT RECOMMENDED to change this file manually, please use Engine Manager Pro, or the Demo Applications to do that.

#### Important Important

From 20Q3 engines vcredist (for Visual Studio 2015, 2017 and 2019) is a must on windows systems. You can download it from here.

## INSTALLATION ON LINUX

In the "linux" folder in the zip file which you have downloaded from ATSS you can find the installer files separated in folders by architecture (arm, arm64, x64 and x86). For example, the 2020 Q3 general engine for x64 contains the following files:

Files in the package: cmanpr-gen-7.3.12.169\_20Q3-x86\_64.tar.gz \_install\_cmanpr-gen-7.3.12.169\_20Q3-x86\_64.sh \_uninstall\_cmanpr-gen-7.3.12.169\_20Q3-x86\_64.sh

Where "\_install\_cmanpr-gen-7.3.12.169\_20Q3-x86\_64.sh" is the script for installing the engine and " \_uninstall\_cmanpr-gen-7.3.12.169\_20Q3-x86\_64.sh" is the script for uninstalling the engine.

The install script does all the necessary file copies to the relevant folders and inserts the engine properties into the gxsd.dat. The engine will be set as the default engine. The uninstall script does the opposite. (For further information please check this chapter)

#### **Note**

You can locate GXSD.DAT in this folder: /var/gx This file contains all of the installed engines and their properties. It is NOT RECOMMENDED to change this file manually, please use Engine Manager Pro, or the Demo Applications to do that.

To check the installed engine, open the Engine Manager Pro application (see chapter 2).

## **ENGINE MANAGER PRO application**

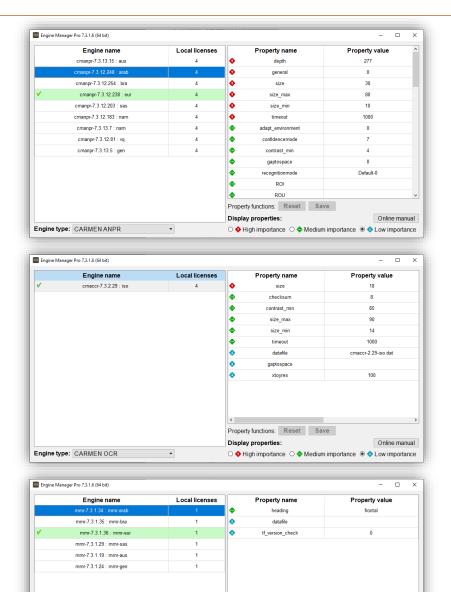

Once the CARMEN® ANPR / OCR Software and the recognition engine(s) have been installed open the Engine Manager Pro application.

On Windows: navigate to **Start / All Programs / ARH Inc. / Engine Manager** or type "Engine Manager" in the search box of your **Start Menu**.

On Linux: navigate to **/opt/gx64/EngineManagerPro/** When you start the utility, the following window will appear:

#### **I**mportant

If you want to take effect your modification in this application, you have to run it as an **administrator** or **root**, otherwise the application will not be able to save the changes into **GXSD.DAT** file!

Property functions: Reset Save

|          |                          |                | •     | gaptos         | space 0  |   | _ |
|          |                          |                | \$    | recogniti      | onmode   | Default-0   |   |
|          |                          |                | •     | R              | וכ   |   |   |
|          |                          |                | \$    | RC             | U  |   |   |
|          |                          |                | Prope | rty functions: | Reset Sa   | ve  |   |
|          |                          |                |       | ay properties  |  | Online m  |   |

For detailed information about the properties, click "Online manual" button which will open <u>this link</u> in case of ANPR engines, <u>this link</u> in case of OCR engines and <u>this link</u> in case of MMR engines.

#### Engine type:

With this selector, you can filter the installed engines to show the ANPR regional engines (like EUR, CAS, NAF, etc...), the ORC related engines (like ACCR, UIC, ISO, etc ...) and the MMR regional engines (like EUR, CAM, etc ...).

#### Display properties:

With this selector, you can filter the engine properties by their importance or their impact to the recognition results.

#### Default engine:

After installing a new engine, that will be set as the default engine. It is highlighted with green and a checkmark is also visible to the left of the engine name.

#### Changing the default engine (which is currently in use):

If you want to change the default engine, right click on the engine which you would like to make as default and click "set as default".

## UNINSTALLING ENGINE(S)

#### 🛛 Note

After deletion of an engine which is the current default engine, the default engine will be the first found engine in the GXSD.DAT file.

#### FROM WINDOWS

Go to Windows  $\rightarrow$  Settings  $\rightarrow$  Apps & features: select the desired engine from the **Installed engines**. Once the engine that you would like to uninstall have been selected, click the **[Uninstall]** button to uninstall the selected engine.

## FROM LINUX

The *\_\_uninstall\_cmanpr-gen-7.3.10-169\_19Q1-x86\_64.sh*" is the script for uninstalling the engine.

The uninstall script does all the necessary file deletion from the relevant folders and deletes the engine properties from the gxsd.dat.

## **ENGMAN**

CONSOLE APPLICATION

On Linux you can find this application in this folder: **/opt/gx64/EngMan/** On windows this application is not part of the installed package, please turn to <u>AR support</u> if you need this application.

If you run this application in Terminal, or Command Prompt: you will get the following help: "Use: EngMan\_x64.exe/EngMan\_x86\_64.out version | -h | -? | [[list {-lic} | getdef | setdef -e:engine] {anpr} {-ocr} {-mmr} {-alltype}] {-json} {-o:outputfile}] Copyright © 2019-2022, Adaptive Recognition

| oppr   | Dung the command on the oppringe   |  |
|--|--|--|
| Global parameter (all commands except version and help): |  |  |
| setdef<br>-e:engine                                      | Sets the default engine.<br>the name of the engine to set the default engine.          |  |
| getdef   | Gets the default engine.   |  |
| -lic   | and mmr engines too.<br>checks the licenses for the engine                             |  |
| List   | Lists the installed engines. If no -anpr, -ocr and -mmr switches added lists anpr, ocr |  |
| version<br>-h, -?  | Displays the version information of the program.<br>Shows this help.                   |  |
| Parameters:  | =  |  |

| -anpr    | Runs the command on the anpr engines             |  |  |  |
|----------|--|--|--|--|
| -ocr     | Runs the command on the ocr engines              |  |  |  |
| -mmr     | Runs the command on the mmr engines              |  |  |  |
| -alltype | Runs the command on the anpr,ocr and mmr engines |  |  |  |

-json The program create json format output.

-o:outputfile The program redirects the output from display to the outputfile.

Some examples:

Gets the installed ANPR engines:

Command: EngMan\_x64.exe/EngMan\_x86\_64.out list -anpr

Output: Engines (ANPR):

================

cmanpr-7.3.14.51 : arab cmanpr-7.3.14.101 : eur cmanpr-7.3.14.95 : nam

Gets the installed ANPR engines with license checking:

Command: EngMan\_x64.exe/EngMan\_x86\_64.out list -lic -anpr

Output: Engines (ANPR):

cmanpr-7.3.14.51 : arab License: FOUND cmanpr-7.3.14.101 : eur License: FOUND cmanpr-7.3.14.95 : nam License: NOT FOUND

```
Gets the installed engines (ANPR, OCR, MMR) with license checking in json format:
 Command: EngMan_x64.exe/EngMan_x86_64.out list -lic -alltypes -json
 Output:
 {
     "Engines (ANPR)": [
          {
              "Engine": "cmanpr-7.3.14.51 : arab",
              "License": "FOUND"
          },
          {
              "Engine": "cmanpr-7.3.14.101 : eur",
              "License": "FOUND"
          },
              "Engine": "cmanpr-7.3.14.95 : nam",
              "License": "NOT FOUND"
          }
     ],
     "Engines (MMR)": [
          {
              "Engine": "mmr-7.3.2.31 : mmr-eur",
              "License": "FOUND"
          },
              "Engine": "mmr-7.3.2.27 : mmr-arab",
              "License": "FOUND"
          },
          {
              "Engine": "mmr-7.3.2.32 : mmr-nam",
              "License": "NOT FOUND"
          }
     ],
     "Engines (OCR)": [
          {
              "Engine": "cmocr-7.3.2.100 : isoilu",
              "License": "FOUND"
          },
              "Engine": "cmocr-7.3.2.84 : uic",
              "License": "FOUND"
          },
     ]
}
```

Gets the default engines and write the result to the result.txt:

Command: EngMan\_x64.exe/EngMan\_x86\_64.out getdef -alltype -o:result.txt Output: The "result.txt" file in the same folder with the following content: Default anpr: cmanpr-7.3.14.51 : arab Default mmr: mmr-7.3.2.31 : mmr-eur Default ocr: cmocr-7.3.2.100:isoilu

Page 10/

Sets the default ocr engine:

Command: EngMan\_x64.exe/EngMan\_x86\_64.out setdef -e:"cmocr-7.3.2.84 : uic" -ocr"

nothing, but after checking the default 'ocr' engine with this command: Output: EngMan\_x64.exe/EngMan\_x86\_64.out getdef -ocr the output will be: Default ocr: cmocr-7.3.2.84:uic

Check the version of this application:

Command: EngMan\_x64.exe/EngMan\_x86\_64.out version
